

How to Set Custom Ringtones in W10M

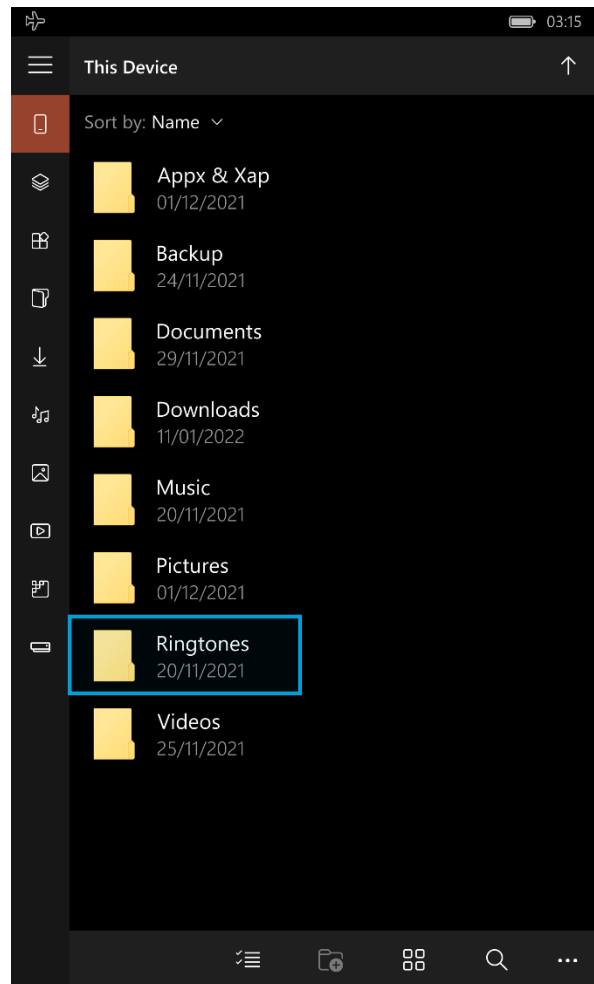

> Open File Explorer of your W10M Device

> Place your custom Ringtone in “**Ringtones**” folder.

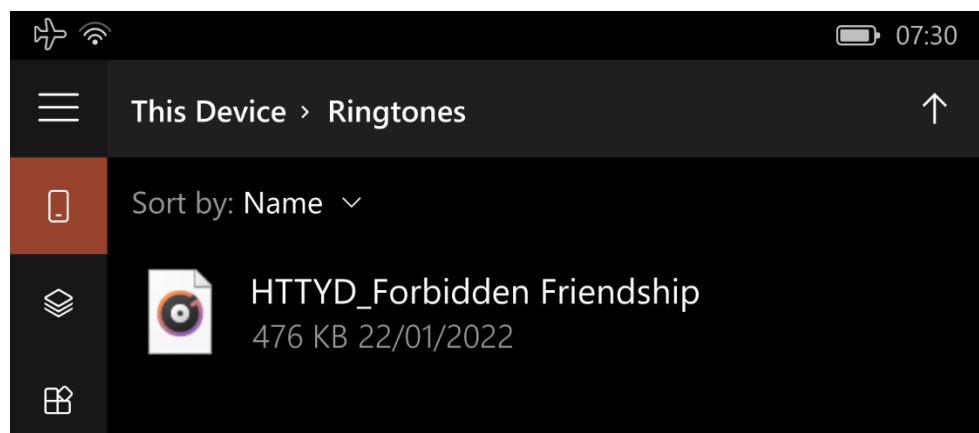

NOTE

The Ringtone file must be in “**.MP3**” or “**.WMA**” format.

Otherwise, the system won’t recognize it as a ringtone.

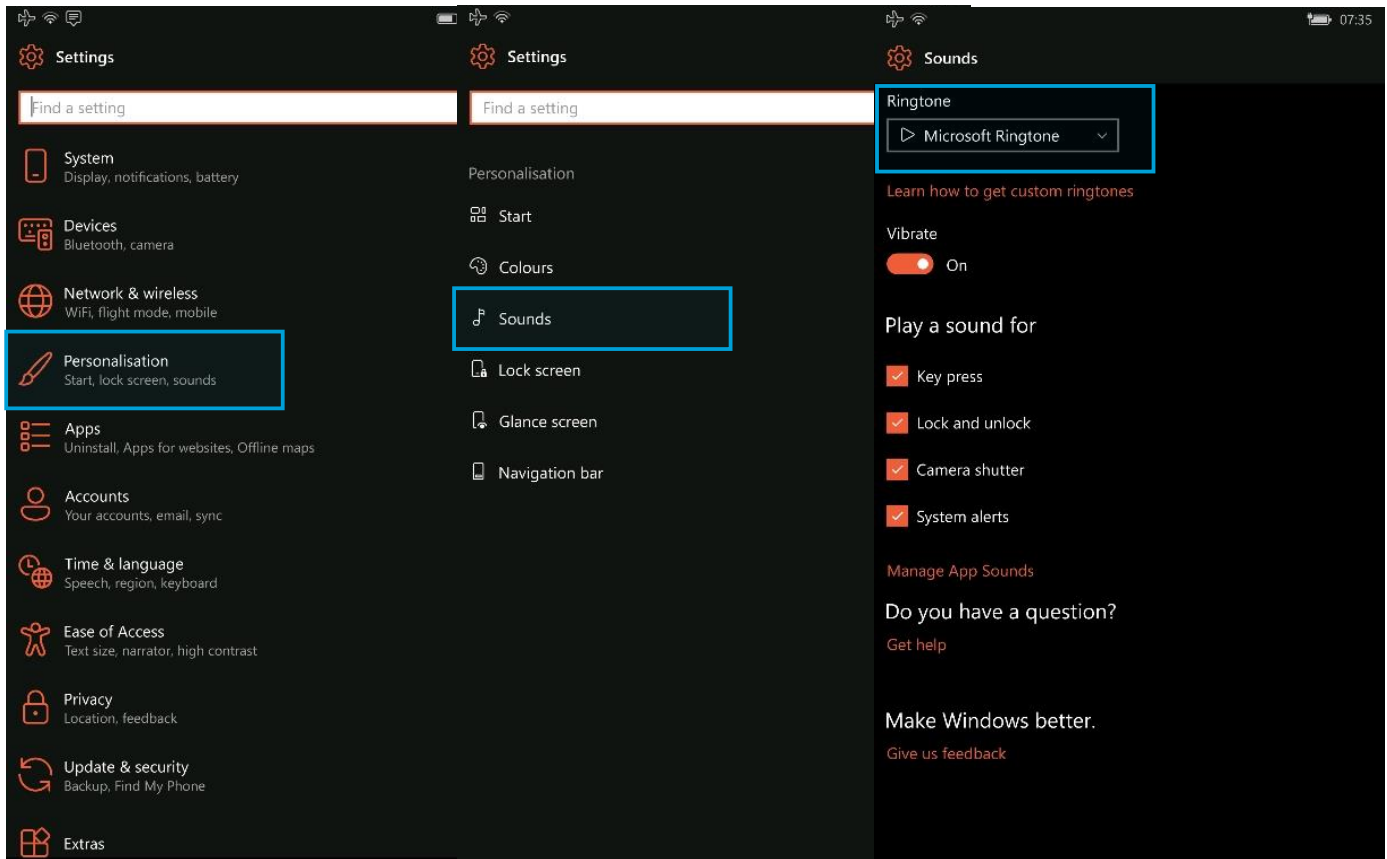

> As an example, it will place a **MP3** named “**HTTYD_Forbidden Friendship**” in Ringtones folder to demonstrate.

> Now go to “Settings → Personalization → Sounds”

> Click on the “Ringtone” dropdown menu to expand it.

> Scroll to the top of the list above the ringtone named “pure”, there should be the ringtone you placed in “Ringtones” folder.
